Mitrefinch Cloud Kiosk

Simplified roll-out across multiple sites

Mitrefinch Cloud Kiosk is a satellite Time and Attendance application that runs on a Windows PC and allows employees to make clockings using an attached biometric USB fingerprint reader.

Mitrefinch Cloud Kiosk installations are simply downloaded over the Internet enabling simplified roll out across multiple sites.

The Lumidigm biometric USB fingerprint reader can be connected to any PC running the Cloud Kiosk client.

Easy to configure and use

Mitrefinch Cloud Kiosk has a clear easy-to-use interface which can be configured to meet your employee clocking needs.

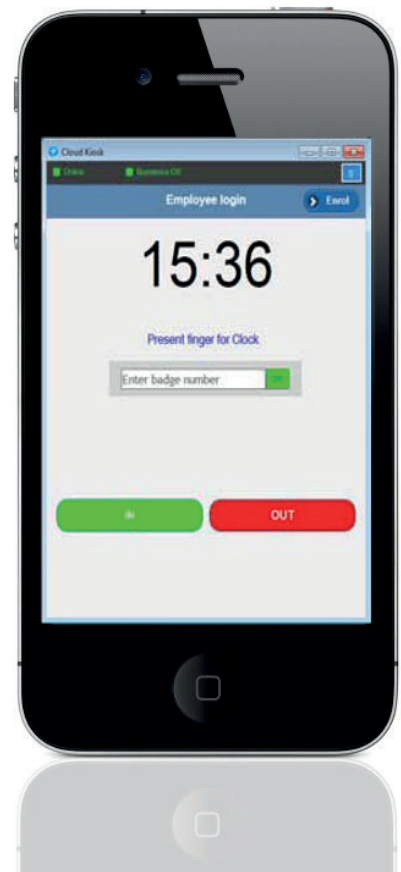

The application can be used in identification or verification clocking mode.

Supervisor functionality

Supervisor Mode gives access to a number of additional features. Supervisors can enrol employees direct on the system using an attached USB biometric reader.

Enrolment generates a fingerprint template for each individual employee with a quality star rating based on predefined thresholds.

Diagnostics enables supervisors to download stored employee templates to the USB reader, enabling the system to identify that particular employee from their fingerprint.

Technical Specifications

Power Supply

A Web Services license is required for each employee that will utilize Mitrefinch Cloud Kiosk.

Minimum System Requirements

PC Specification:

- 1 GHz processor with 512MB RAM
